

• FOR CLINICIANS AND CARE TEAMS

# TOBA Time Out Checklist

Complete before any non-traumatic lower-extremity amputation.

PATIENT \_\_\_\_\_

DATE OF BIRTH \_\_\_\_\_

PLANNED PROCEDURE / LEVEL \_\_\_\_\_

## 01 Confirm

- |                                                        |                                                                      |
|--------------------------------------------------------|----------------------------------------------------------------------|
| <input type="checkbox"/> Correct patient and procedure | <input type="checkbox"/> Side and amputation level confirmed         |
| <input type="checkbox"/> Care team members identified  | <input type="checkbox"/> Patient and family informed of the time out |

## 02 Vascular assessment on record

- |                                                     |                                                                       |
|-----------------------------------------------------|-----------------------------------------------------------------------|
| <input type="checkbox"/> Ankle-brachial index (ABI) | <input type="checkbox"/> Toe pressures / toe-brachial index           |
| <input type="checkbox"/> Arterial duplex ultrasound | <input type="checkbox"/> CT angiography, MR angiography, or angiogram |

Date of most recent study: \_\_\_\_\_

## 03 Review before the procedure

- ☐ Vascular results are displayed and accessible to the surgeon
- ☐ Results reviewed by the surgical team
- ☐ Vascular surgeon or interventionalist evaluation completed or documented
- ☐ Revascularization options considered and documented

## 04 Decide on objective findings

**No vascular assessment on record?** Pause, obtain vascular testing, and refer for vascular evaluation per your institution's protocol before proceeding.
